Dear Hiring Team -

My name is Natallia and I am a recent graduate of Flatiron School Full Stack Web Development Program.

Prior to attending Flatiron School, I lived in Belarus where I studied Fine Arts, Civil Engineering with an eye towards designing roads and bridges, and Computer Science. My studies helped me hone my design and aesthetic skills, which I now use instead to build websites and applications.

As you may be aware, Flatiron School is a highly selective coding bootcamp, where I was awarded a full scholarship to the web development immersive program. During my studies, I developed a strong skillset in a variety of technologies, focusing on the fundamentals of Rails, Ruby, Javascript, and React. Students are also enabled with the tools they need to teach themselves any language or framework from there. I had a really wonderful experience, and am excited to work as a full stack engineer in an environment in which I build quickly and with precision.

When I think about Priceline, I am excited to be a part of an organization with an exciting and lofty goal to simplify our lives when it comes to booking. Planning can be really draining. I used your website many times and always had a great experience.

 I am a very visual person with a passion for design, and as such, would ideally be interested to contribute to the front-end development work of a team. I have a strong experience working with HTML5, CSS3, and Ruby and have relied heavily on React in my most recent work.

As I consider my first steps into the development field, I can't imagine a space that I would be more excited to start my career than with the engineers at Priceline and make valuable contributions to the engineering team. Here are links to my [Website](#) and [LinkedIn Profile](#). Please let me know if there is any additional information I can provide.

Many Thanks,
Natallia
